RIT CROATIA PROGRAM OUTLINE

PROGRAM TITLE: WEB AND MOBILE COMPUTING

TYPE OF PROGRAM: Undergraduate professional program

DURATION OF PROGRAM: 4 years /8 semesters

TOTAL NUMBER OF ECTS: 240

SCIENTIFIC AREA: Technical Sciences

SCIENTIFIC FIELD: Computing
1. ENROLLMENT CRITERIA

Admission requirements: Upon completion of a high-school program students are admitted on the basis of results from the State Matura exams (state high-school exit exam) or results from the entrance exam for the undergraduate program.

Application process:

1. Candidates may apply to RIT Croatia using the Central Application System (“Postani student”) and taking the State Matura Exams (state high-school exit exam):
   - Mathematics: B level
   - English language: B level

2. Candidates may apply to RIT Croatia through the entrance exam admission process consisting of written exams in Mathematics and English language. The entrance exam admission process is intended for the following candidates:
   - Candidates who have completed high school education prior to AY 2009/2010
   - Candidates who have completed vocational or art school programs, obtaining a basic or secondary professional high-school degree through in-school final assessments (completion of a final assignment)
   - Candidates who have completed their secondary education outside Croatia, not applying through the Central Application System.

2. CRITERIA FOR ENROLLMENT IN THE NEXT SEMESTER/YEAR LEVEL

A student must maintain a cumulative GPA of 2.00 or above at RIT Croatia in order to remain in good academic standing. Any student whose Term Grade Point Average falls below 2.00 (and is above 1.00) or whose overall Cumulative Grade Point Average falls below 2.00 will be placed on probation (i.e. is eligible to enroll in classes, though specific conditions of enrollment or restrictions will be applied).

Any student whose overall Cumulative Grade Point Average falls below 2.00 will be placed on academic warning.

Suspension refers to the academic action taken when a student is not permitted to enroll in courses at the university for a determined period of time.

a. Any degree-seeking undergraduate student whose Term Grade Point Average falls below a 2.00 (C average) and for whom suspension is not applicable will be placed on probation.
b. Any student who is on probation and who is not removed from probation in the two succeeding terms (including summer session) in which credit is attempted will be suspended from RIT Croatia for a period of one calendar year.

c. Any student whose Term Grade Point Average falls below 1.00 will be suspended from RIT Croatia. Students will be able to return the following academic year, in the same term they were suspended.

d. A suspended student cannot enroll in any credit or non-credit course at the university while on suspension. This also includes co-ops.

e. A suspended student may not be admitted to another program while suspended.

f. In special circumstances, a suspended student may apply in writing to the Associate Dean for Academic Affairs for a suspension waiver. This waiver request will be evaluated by the Associate Dean and the academic advisers before submission of the request to the Dean. This waiver must be approved by the Dean of the College.

The waiver carries specific responsibilities on the student’s part. These may include registering in specific courses, achieving a semester GPA of at least 2.5, not withdrawing from any courses in which we will ask the student to enroll, taking a maximum term load of 12 credits, attending bi-weekly meetings with his or her faculty adviser. These responsibilities are stated in a contract the student will be required to sign. Should the student fail to abide by the conditions of the contract, or should the academic performance warrant suspension again, he or she would then be suspended with no opportunity to appeal.

3. TRANSFER PROCEDURE
Credit transfer procedure and transfer procedures generally speaking are defined by The Rulebook on Admission Requirements and Transfer Procedures from other HE institutions to RIT Croatia.

4. GRADUATION REQUIREMENT
IT Graduation requirements

All of the following are required for graduation from a student’s program:

- A Cumulative Grade Point Average (GPA) of 2.00
- Satisfactory completion of the Capstone Course
- Completion of 126 credits for the B.S. degree (240 ECTS for the Croatian four-year degree)
- Satisfactory completion and grade for the required co-ops in duration of 800 working hours
- A completed Application for Graduation returned to Student Services
A completed “Statistički list” form returned to Student Services
No outstanding library dues
Full payment or satisfactory adjustment of all financial obligations

**Graduation with Honors**

Honors posted to the academic record will be based upon the student’s Cumulative Grade Point Average upon completion of the degree requirements. The numerical criteria for graduation with honors are as follows:
- **Summa cum laude** – 3.80 Cumulative GPA
- **Magna cum laude** – 3.60 Cumulative GPA
- **Cum laude** – 3.40 Cumulative GPA

5. **DEGREES UPON COMPLETION OF THE STUDIES**

RIT Croatia is the only educational institution in Croatia granting two degrees: an American degree from RIT and a Croatian degree from RIT Croatia.

Upon successful completion of the four-year program in Information Technology students receive a Bachelor of Science (B.S.) degree in Information Technology from RIT (all students enrolled as of 2016 receive a Bachelor of Science (B.S.) degree in Web and Mobile Computing). Studies at RIT Croatia are also accredited by the Croatian Ministry of Science, Education and Sports and meet the requirements of the Bologna Agreement. As a result, all students completing the four-year IT program will receive the degree title of stručni prvostupnik/prvostupnica (baccalaureus/ baccalaurea) inženjer/inženjerka informacijskih tehnologija.

In order to receive a Croatian degree from RIT Croatia students must have either a high school diploma issued by a Croatian high school or a high school diploma recognized by the Ministry of Science, Education and Sports of the Republic of Croatia.
6. PROGRAM OUTCOMES

IST grads thrive in what has been dubbed the Information Age – an age where technology impacts every part of our lives and rapidly expanding amounts of information are transferred at ever-increasing speeds. However, IST grads do more than simply thrive in this new age; they drive it.

We’re constantly thinking about the next social media platforms, electronic medical systems, ePublishing platforms, impactful apps and so much more.

The one bond that all of these technologies share is access to information. How do we store it, manipulate it, move it, transform it, or display it? How do we make it work for us?

And it’s not just how we deliver information today—it’s how we will deliver information tomorrow. The IST degrees all include foundational skills that prepare you for long-term success, by giving you experience with state-of-the-art technologies that will have employers seeking you out, and the support to make a difference.

Information is all around us and IST graduates are involved in every aspect of it. Name a tech buzzword and you’ll find our graduates involved in it: cloud computing, virtualization, big data, NoSQL, geospatial technologies.

But - and this is important - while IST graduates enjoy working with technology, they see it as a means to an end. Our graduates are about leveraging technology to deliver more information to more people in more ways. It’s not just the technology—it’s the combination of technology, information, and people.

The Five Pillars of IT

In order to “make things work” for people in today’s (and tomorrow’s) sophisticated computing environments, IT Professionals need core competencies in five essential areas:

- Programming and application development
- Web and mobile development
- Database management systems and applications
- Networking and system administration
- User-centered design and deployment, and human-computer interaction.

The fifth pillar focuses on the human element. This is the defining competency of the IT professional; what distinguishes us from, for example, a computer scientist. To be successful users’ advocates, we must see the world through their eyes. We must “be one” with our users, and learn about the tasks they perform and the skills they possess. From this, we can then select, integrate and deploy technology that enhances their lives. This requires skills in information gathering, user-centered design, and deployment. It also attracts the student
who cares more about how people use computers than about how computers work under the hood. Creativity, technology, and communication skills—these are the core competencies of IT.

Many students in our BS in IT program focus on one or two technical aspects that prepare them for careers in a variety of market niches like enterprise systems, web applications, or database management to name a very few of the many possibilities. Other students choose a broader path to prepare for “general practitioner” or “Jack of all trades” jobs that are prevalent in virtually every enterprise and organization. In short, the IT program at RIT offers the opportunity to specialize, but does not require that you do so. Whatever you want IT to be, IT will be.

Program Goals

- Graduates of the BS/IT program will be employable as IT professionals, able to secure positions primarily in (but not limited to) business and industry.
- Graduates of the BS/IT program will have appropriate foundational skills so that they may be lifelong learners in the IT field.
- Graduates of the BS/IT program will be prepared to work as team members and to rise to positions of leadership as necessary.
- Graduates of the BS/IT program will be prepared for further academic study and will be able to make contributions to the growing discipline of Information Technology.

YEAR 1 – COURSE DESCRIPTIONS
Course Description

This is the first course in the introductory programming sequence required for all Information Technology students. Topics include elementary data types, arithmetic and logical operations, control structures and error handling, methods, inheritance, reusability, input/output and an object-oriented programming design and implementation. Emphasis is placed on the development of problem-solving skills. Moderately large programming assignments are required.

Course Objectives

General:
This course will provide students with the foundational skills necessary to do object-oriented programming. Emphasis is placed on program design methodologies and problem solving using commonly available development tools.

Specific:
Upon course completion, a student should be able to implement moderately large programming projects and should:

- Demonstrate the ability to configure a computer to create, compile, and run programs.
- Demonstrate the ability to write statements using different data types and operators that perform necessary operations based on the program’s requirements.
- Be able to analyze errors that occur when programs run and make changes based on this feedback. Be able to use sequence, selection and loop statements to control the execution of a program.
- Demonstrate the ability to create methods with or without return values that perform various operations, and invoke them.
- Be able to use utility Application Programmer Interface (API) classes such as Math and String, and use their methods to solve various problems.
- Demonstrate the ability to create a class by defining both attributes that describe the state of the class and methods that enforce Object Oriented Programming (OOP) encapsulation principles.
- Be able to define arrays, and determine when to create and use arrays.
- Demonstrate the ability to work with multiple classes and multiple instantiations of a class.
- Write object-oriented programs with multiple class files and create objects used between class files.
- Write event-driven programs using distinct listener class file objects and/or same class file listener objects.
- Write object-oriented programs using class inheritance.
• Write interface and abstract class files and use them in object-oriented programs
• Write object-oriented programs to read and write data using the java.io package
• Write classes with catch and throw exception class objects
• Write programs that pass and receive objects via an object method

Grading
Homework Assignments 20%
Labs 10%
Practical Exam 1 5%
Practical Exam 2 10%
Practical Exam 3 15%
Practical Exam 4 15%
Comprehensive Theory Exam 15%
Daily Quizzes 10%

Class format:
Class hours 4 Lab hours 0

Course materials and textbooks:
“Big Java: Compatible with Java 5, 6 and 7” by Cay S. Horstmann
ISTE-140 Web and Mobile I

Course Description

This class provides an introduction to key Internet, web, and multimedia technologies, as well as familiarity with the Macintosh computer platform. Topics covered include computer-mediated communication, basic Internet applications such as telnet, FTP, and the WWW, basic digital image techniques, and web page development and publishing.

Course Objectives

General: This course provides a basic introduction to Internet technologies and web development. The Internet technology topics (UNIX, FTP, Telnet, email, protocols, etc.) provide a foundation for a variety of IT core courses. The web development and imaging topics provide an introduction to the multimedia and web development topic area within the department, and are a prerequisite for concentration-level courses in the computer-mediated experience area of the curriculum.

Specific Objectives

By the end of the quarter, students will have a working knowledge of:

- Key figures and events in the development of the Internet and the World Wide Web
- How to use Internet search engines to search for and retrieve information relevant to assignments and projects
- Internet protocols and tools, including SSH, SFTP, electronic mail, and conferencing
- How to perform basic file and directory management tasks in Unix environments
- The components of digital images, sound, and video, including file formats, resolution, color models, and compression methods
- How to use imaging programs (e.g., Photoshop) to create graphic elements for web pages, including logos and composite images
- How to create web pages using valid HTML and CSS
- How to identify and implement basic principles of graphic design, including contrast, alignment, proximity, repetition, and effective use of color and type
- How to use server technologies (e.g., Server-side Includes) for cross-browser issues
- Utilize the Macintosh operating environment and applications for web development tasks.
By the end of the quarter, students will be able to:

- Build a multi-page web site, including graphics and media
- Apply appropriate design principles to the design of a site
- Create or modify graphics for inclusion in a web site
- Mount their website on a designated server
- Work with a Macintosh operating environment comfortably

Grading:

- Web Project 1 ......................................................... 10 points
- Web Project 2 ......................................................... 15 points
- Web Project 3 ......................................................... 20 points
- Attendance, Participation, Homework ........................................ 15 points
- Midterm Exam .......................................................... 10 points
- Midterm Practical ...................................................... 10 points
- Final Exam .............................................................. 10 points
- Final Practical ......................................................... 10 points + Pass/Fail
- TOTAL ................................................................. 100 points

Class format:  Class hours 3  Lab hours 0

Course materials and textbooks:

The following text is optional, but suggested for reference:

Watch the online video courses at linda.com provided by RIT Library: [http://library.rit.edu](http://library.rit.edu)

Below are some important links that you will use frequently throughout the quarter:

- HTML Validator: [http://validator.w3.org/](http://validator.w3.org/)
- CSS Validator: [http://jigsaw.w3.org/css-validator/](http://jigsaw.w3.org/css-validator/)
- Web Development Tutorials: [http://www.w3schools.com](http://www.w3schools.com)
NMDE-111 New Media Design Digital Survey I

Course Description

This project-based course is an investigation of the computer as an illustrative, imaging, and graphical generation tool. It develops foundational design skills in raster and vector image creation, editing, compositing, layout and visual design for online production. Emphasis will be on the application of visual design organization methods and principles for electronic media. Students will create and edit images, graphics, layouts, and typography to form effective design solutions for online delivery.

Course objectives

In general, after completing this course, students should

- Introduce the fundamental creative principles for generating digital content and designs that communicates concise and impactful visual messages
- Understand the technical principles and tools of digital graphics
- Introduce principles and methods of visual organization, design and graphic analysis
- Develop skills that allow the student to decide the best options to generate and output content for digitally based imagery and design
- Develop visual solutions using observational drawing, sketching, image manipulations as well as photographic techniques and imagination
- Develop solutions that reflect semiotic concerns of effective communication including aesthetic considerations, appropriate concept development and pragmatic concerns
- Understand the ethics and copyright issues of digital graphics.

Learning outcomes

- Demonstrate content creation methods using image and graphical manipulation
- Demonstrate effective design solutions using complex imagery, layout and typographical elements
- Evaluate the use and effectiveness of imaging, visual design solutions and aesthetic qualities
- Understand and display creative and conceptualization skills through research and documentation
- Demonstrate visual solutions and content creation for editorial design problems
- Apply visual design elements, principles, imagery and layouts to interactive creative problems
- Generate effective visual graphics for user interface elements and icons.
Grading:

In-Class Exam 20%
Project 1 15%
Project 2 15%
Project 3 15%
Lab Assignments 20%
Homework 15%

Class format: Class hours 2  Lab hours 3

Course materials and textbooks:

Online educational resources (i.e. Lynda.com, Cineversity.com, psdTuts.com)
Instructor Handouts and Video Tutorials
Computer with appropriate software and Internet access
Applicable textbooks (Beyond Photoshop, The Illustrator WoW, Teaching Design)
MATH-131 Discrete Mathematics

Course Description:

This course is an introduction to the topics of discrete mathematics, including number systems, sets and logic, relations, combinatorial methods, graph theory, regular sets, vectors, and matrices.

Goals of the Course:

- To provide students with knowledge of the mathematical concepts needed for understanding and analyzing programming.
- To discuss the many applications of mathematics to computer science and computer information systems.
- To stress the applications of theorem results in Information Technology.

Learning outcomes and associated assessment methods of those outcomes:

- Students will learn the mathematical concepts needed to understand and analyze programs:
  - Use notation of set theory and logic and elementary proof techniques, write proof by induction.
  - Use language of set theory to analyze relations, functions, graphs, and inverse functions.
  - Use Boolean algebra to analyze disjunctive and conjunctive normal forms and Karnaugh maps.
  - Use binary, octal and hexadecimal number representations.
- Students will learn about applications of mathematics to computer science and computer information systems.
- Students will understand the applications of theorem results in Information Technology.

Program or general education goals supported by this course:

- to develop students’ understanding of the mathematical framework that supports engineering, science, and applied mathematics.
- to develop a capacity for critical and analytical thinking.
- to develop an appropriate level of mathematical literacy and competency.

PHIL-101 Intro to Philosophy

Course Description

This course introduces students to some of the major problems, methods and insights of philosophy with readings from both classical and contemporary sources (Plato, Descartes, Thomas Aquinas, Dostoevsky, et al.) and detailed discussions. The focus of Introduction to Philosophy is primarily not on finding definite answers on hard questions, but rather on formulating the questions and understanding the method of answering them; because these questions enlarge our conception of what is possible, enrich our intellectual imagination and diminish the dogmatic assurance which closes the mind against speculation.

Course Objectives

The course aims to introduce analytical and creative thinking in general rather than a survey of philosophical disciplines, their methods, doctrines and leading ideas. Instead of trying to give an all-embracing account of different forms philosophy has assumed throughout its long history we shall focus on several characteristic examples illustrating how classical and modern thinkers formulate their questions and how they grapple with their issues in contrast to ordinary, religious and scientific consciousness.

In addition, the course will provide a preliminary orientation about the notion of philosophical argument, its various forms and the ways arguments should be analyzed.

Learning outcomes:

The main expected outcomes of this course are:

- to become skillful in reading and interpreting philosophical texts (rightly considered as belonging to the category of the most complex intellectual products);
- to become familiar with major philosophical problems and the methods of handling them;
- to be able to adopt "philosophical attitude" as an elevated form of human curiosity and resistance to any kind of dogmatism.

Grading

- 2 Exams 35 pts
- Research Project 35 pts
- Class participation (active participation in class...
Class format

Class hours 3

Course materials and textbooks:

Reading philosophical texts is very different from reading a novel or a newspaper article. Quickness and quantity in reading do not value in philosophy as much as proper understanding of the problems, good insight into the questions and an awareness of different interpretive possibilities. Thus, it is always better to read less material thoroughly than to cover more readings superficially. Careful reading takes time and requires concentration.

The course material consists of the following elements:

- The collection of reading materials available on line in Mycourses. The collection includes the following texts:
  - Descartes, *Meditations* (selection)
  - D. Chalmers, *The Matrix as Metaphysics*
  - Paul, “Hymn of love”
  - Plato, *Symposium* (selection)
  - J. Lear, *Freud* (selection)
  - Anselm, *Proslogion* (selection)
  - Th. Aquinas, *Summa theologiae* (selection)
  - Th. Nagel, *What does it all mean?* (selection)
  - B. Libet, “Do we have free will?”

- Additional online sources:
  - RIT Databases (Wallace Library)
  - Stanford Encyclopedia of Philosophy
  - Classical Texts on the Internet (www.classics.mit.edu)

- Films.
ASCI-10 YearOne

Course Description

YearOne Seminar is a course for first-year students designed to provide an introduction to college life and to support you as you adjust to your life at RIT Croatia. YearOne meets once per week for 12 weeks during the Fall semester. It includes lecturing, classroom discussions, and many guest speakers from the Zagreb, Dubrovnik, and Rochester campuses and will introduce you to many RIT resources.

Course objectives

- Vital resources: Introduce you to vital resources and services within the RIT community in order to navigate your way around in college life and to make most of your college experience.
- Academic preparedness: Familiarize with college level academic expectations and the resources to assist you in being academically successful.
- Inclusiveness: We address the issue of inclusiveness: Respecting and appreciating the complex and diverse perspectives within the RIT community. Increase your sense of belonging by providing opportunities for you to connect to one another and to the greater RIT community.
- Self-discovery: Explore and articulate your individual aspirations and values. Increase your awareness of your decision-making, of your daily choices, and resources that may help you.
- Engagement: You are expected to participate in campus events to integrate into the campus community (e.g. in Community Service Day, but also in party events like Fall BBQ or Holiday Auction).

Introduction to Academic English

Course Description

In Introduction to Academic English, students increase their knowledge and control of grammatical structures in writing. This course focuses on the content, structure, and organization of sentences and paragraphs. Students will practice and improve their skills in the writing process, including prewriting, writing, revision, and editing techniques.

Course objectives

- improve students’ writing skills
- expand students’ vocabulary

Learning outcomes

Students will

- be able to use correct word order in a sentence,
- be able to use the right collocations,
- be able to use idioms appropriately,
- be able to use basic tenses to write about past, present, and future events,
- be able to apply punctuation and capitalization rules,
- be able to write simple and compound sentences,
- be able to write short and clear paragraphs,
- be able to understand a variety of shorter texts,
- be able to distinguish the properties of academic style from less formal styles,
- be able to draft and revise their writing,
- understand the importance of academic honesty,
- receive feedback from their peers and give feedback to their peers.

### Course materials and textbooks:

**Required texts and resources:**

**Suggested texts and resources:**
Course Description

This is the second course in the introductory programming sequence required for all students majoring in Information Technology. Topics include GUI interface development, file I/O, traditional programming data structures, programming utilities and reusability, introductory project design and management concepts and other concepts as time permits. Emphasis is placed on the development of problem-solving skills. Large programming assignments are required.

Course Objectives

**General:**
The purpose of this course is to provide students with an introduction to the advanced concepts and skills needed to support the programming requirements of up-stream courses in the IST curriculum. Specifically, this course is intended to encourage students to continue to develop their problem solving skills, to begin building a “logical toolkit” of algorithms and data structures, and to understand the benefits of reusability. Students should also grasp the basics of program analysis, design and project management skills.

Contribution to Measurable Program Outcome(s):

- Program effectively within the student’s specialty area
- Apply a development life cycle to a problem
- Design and develop a software prototype
- Participate effectively as a team member and/or leader
- Practice user-centered design, development, and deployment
- Make effective oral presentations

**Specific:**

At the end of this course, a student should be able to implement moderately large programming projects both individually and in a team. Specifically, a student should:

- Demonstrate the ability to create graphical user interfaces based on a problem description.
- Demonstrate the creation and use of reusable objects.
- Demonstrate the use of the language-supplied data structure classes within a program.
- Be able to create, read and write character-based files, showing knowledge of the way data is represented.
- Be able to create, read and write byte-based files, showing knowledge of the way data is...
represented.

- Determine when it is appropriate to use threads and demonstrate how to create a multi-threaded program.
- Demonstrate how to communicate between two machines using the network programming classes.
- Be able to design and implement a fairly large project as part of a team.

Class hours 4 Lab hours 0

Course materials and textbooks:
“Big Java: Compatible with Java 5, 6 and 7” by Cay S. Horstmann
Course Description

This course builds on the basics of web page development that are presented in Web & Mobile I and extends that knowledge to focus on theories, issues, and technologies related to the design and development of web sites. An overview of web design concepts, including usability, accessibility, information architecture, and graphic design in the context of the web will be covered. Introduction to web site technologies, including HTTP, web client and server programming, and dynamic page generation from a database also will be explored. Development exercises are required.

Prerequisites: ISTE-120 and ISTE-140 or equivalent course.

Course Objectives

Among others, following topics will be covered in this course:

- Web and Mobile Design, CSS Positioning and Responsive Design
- Information Architecture and the DOM
- CSS Frameworks
- JavaScript, JavaScript Libraries, Client-Side Form Validation
- Introduction to PHP, Server-Side Form Validation
- AJAX with JavaScript and PHP
- Database Connectivity, MySQL, phpMyAdmin

Learning Outcomes

By the end of this course, the student should be able to:

- Demonstrate proficiency in web site design, planning and documentation as part of a team.
- Use information design, graphics, and markup languages to create medium scale web sites.
- Use client side programming such as JavaScript and the document object model to create dynamic and interactive web pages.
- Use server side programming and databases to improve site performance, modularization, and separation of logic from data.
- Use the HTTP protocol to properly submit, validate and process user input data.
Grading

Attendance 5 %
Assignments (Homework & In-Class) 20 %
Individual Projects 30 %
Group Projects 30 %
Final Practical 15 %
TOTAL: 100 %

Class format: Class hours 3, Lab hours 0

Course Materials and Textbooks

This course does not require any textbooks. All required readings will be from digital media and will be linked or posted on myCourses.
Course Description

A presentation of the fundamental concepts and theories used in organizing and structuring data. Coverage includes the data modeling process, basic relational model, normalization theory, relational algebra, and mapping a data model into a database schema. Structured Query Language is used to illustrate the translation of a data model to physical data organization. Modeling and programming assignments will be required.

Course objectives

General course goals
Provide students with the foundation skill set required to organize and to structure data for subsequent computer processing. The skill set includes the ability to interpret Entity-Relationship data models, to translate an Entity-Relationship data model into a theoretical data model, to apply normalization theory.

Grading

Your final grade will be based on the work you submit, your demonstration of knowledge on exams, and your participation in the course.

Component                   Weight
Homework                    40% (equal weighting)
Midterm Exam                15%
Midterm Practical           15%
Final Exam                  15%
Final Practical             15%

Class format: Class hours 3 Lab hours 0

Course materials and textbooks:

There are no required textbooks for the course.

If you feel that a textbook would be a helpful resource for you, the following texts are suggestions for this course:

MATH-161 Applied Calculus

Course Description

A course stressing applications of calculus concepts to solving problems in business and Allied Health. Topics include the limit concept, differentiation, partial differentiation, and integration.

Course objectives

- To have students learn the basic definitions, concepts, rules, vocabulary, and mathematical notation of calculus.
- To provide students with the necessary manipulative skills required for solving problems in calculus.

Learning outcomes

- Define concepts of calculus. Solve calculus problems.
- Apply calculus to problems in business, economics and the medical sciences.

Grading

First Test (30 points), week 5,
Midterm (30 points), week 10
Final test (30 points), week 16,
Attendance (10 points).
TOTAL 100 points

The A-F letter grade is computed according to the standard 100% system: A = 91-100; B = 80-89; C = 70-79; D = 60-69; F = 0-59.

Class format: Class hours 4 Lab hours 0

Course materials and textbooks:

Tan, Applied Calculus For the Managerial, Life, and Social Sciences, Brooks/Cole, Pacific Grove, CA
Course Description

This class is an intensive introduction to researched writing. Students will develop proficiency in analytical writing, critical reading and critical thinking, by writing within a variety of contexts and with a variety of purposes. Students will develop writing strategies and research skills that they will draw on throughout their academic careers. There will be particular attention to the writing process including an emphasis on teacher-student conferencing, self-assessment, class discussion, peer review, formal and informal writing, research and revision.

Course objectives

- to have students learn appropriate writing process strategies: pre-writing, composing and revising, editing, and consideration of audience and purpose
- to teach students to employ critical and creative thinking skills for self-assessment and reflection on the writing process
- to provide students with the appropriate grammatical and mechanical structures to support the development of their writing and to successfully express meaning
- to have students read advanced college-level texts for the purposes of discussion and composition
- to teach students to collaborate with peers and learn how to supply effective feedback
- to provide students with the skill for using a range of technologies to address different audiences

Learning outcomes

Students will:

- practice the appropriate writing process strategies: pre-writing, composing and revising, editing, and consideration of audience and purpose
- employ critical and creative thinking skills for self-assessment and reflection on the writing process
- apply the appropriate grammatical and mechanical structures to support the development of their writing and to successfully express meaning
- read advanced college-level texts for the purposes of discussion and composition
- collaborate with peers and learn how to supply effective feedback
- use a range of technologies to address different audiences

**Course materials and textbooks:**

YEAR 2 – COURSE DESCRIPTIONS
Course Description

The third course in the programming sequence expanding the student’s knowledge base of higher level programming concepts including data structures, algorithm development and analysis, Big-O notation, directed graphs, priority queues, performance, and a greater understanding of how complex software can more easily be designed. Programming assignments are required.

Course Objectives

The purpose of this course is to advance the student’s understanding of the use of data structures in designing a system and other programming related concepts. This includes algorithm development, proper application of data structures, software performance and a greater understanding of advanced programming algorithms are fundamental for developing more efficient software in less time.

Course Outline

- Intro to Data Structures and Algorithmic Complexities
- Number systems and Storing Numbers in Computers
- Memory Management
- Algorithm Analysis
- Performance / Efficiency
- Big-O notation
- Recursion
- Scaling applications
- Advanced Data Structures
- Linear Data Structures - Arrays, Strings, Stacks, Queues, Linked Lists
- Non-Linear Data Structures - Trees, Hash Tables, Heaps, Graphs
- Sorting and Searching Advanced Data Structures
- Producer / Consumer
- Study of Miscellaneous Algorithms

Grading

Exercises (homework and labs) 60%
Exams (theory and practical midterm and final) 40%

ISTE-260 Designing the User Experience

Course Description

The user experience is an important design element in the development of interactive systems. This course presents the foundations of user-centered design principles within the context of human-computer interaction (HCI). Students will explore and practice HCI methods that span the development lifecycle from requirements analysis and creating the product/service vision through system prototyping and usability testing. Leading edge interface technologies are examined. Group-based exercises and design projects are required.

Course objectives

| Requirements Analysis                           | Diffusion of Innovations |
| Research Methodologies                          | Design life cycles        |
| Usability Goals                                 | Cognitive Psychology      |
| Personas                                        | User Profiles             |
| Task Analysis and decomposition                 | Heuristic Evaluations     |
| Universal/Global/Accessibility/Assistive Technologies | Mobile/Pervasive       |

NSSA-290 Networking Essentials for Developers

Course Description
This is a course in the basics of network communication for software developers. Topics will include the OSI 7-layer model and its realization in the TCP/IP protocol stack. Students will also learn about naming and name resolution as it is used in the internet, plus the basics of routing and switching. The focus in all of this will be on an analysis of how name resolution, routing and switching operate from the developer's perspective. The specifics of how the socket transport layer appears to the programmer and operates will be a key topic. Finally, an overview of authentication mechanisms and number of examples of the security vulnerabilities of existing communication protocols will be provided to instruct students on the inherent risks of communication via the internet. (Pre-requisite: one year of programming in a high level language)

Course Objectives
This course will provide students with the network knowledge needed to develop and design software applications. At the end of the course, students should be conversant in:

● Network Communications
  ○ TCP/IP and OSI models
    ▪ Why do we have them?
    ▪ What are they used for?
    ▪ What are the security implications?
  ○ Physical and Data link communications
    ▪ How do I get data from point A to point B?
    ▪ How do I know it is from this device?
    ▪ How do I send it to everyone or a specific person?
  ○ Network and Transport Layers
    ▪ What is an IP address?
    ▪ What is DHCP and DNS? Why do we use it? How does it impact my coding?
    ▪ How do we use it?
    ▪ What is private versus public IP addresses?
    ▪ What about firewalls and communications?
    ▪ What are port numbers and sockets? How do I create code that allows for communication that is secure or direct?
  ○ Communications
    ▪ How do I know how the data is being processed or communicating?
    ▪ What affect does routing over multiple network topologies have on communications?
How does on demand (client) versus server (passive listening) work when sending and receiving data?

Grading

Grading will be based on the quality of submitted work as follows:

*Submission*
- Midterm Exam: 25 points
- Final Exam: 25 points
- Quizzes (5 each): 20 points
- Homework #1: 15 points
- Homework #2: 15 points

**TOTAL 100 points**

Class format: Class hours 3  Lab hours 0

Course materials and textbooks:
- Networking Essentials (3rd Edition) - Jeffrey S. Beasley, PiyasatNilkaew
UWRT-150 FYW: Writing Seminar

Course Description

This class is an intensive introduction to researched writing. Students will develop proficiency in analytical writing, critical reading and critical thinking, by writing within a variety of contexts and with a variety of purposes. Students will develop writing strategies and research skills that they will draw on throughout their academic careers. There will be particular attention to the writing process including an emphasis on teacher-student conferencing, self-assessment, class discussion, peer review, formal and informal writing, research and revision.

Course objectives

● to have students learn appropriate writing process strategies: pre-writing, composing and revising, editing, and consideration of audience and purpose
● to teach students to employ critical and creative thinking skills for self-assessment and reflection on the writing process
● to provide students with the appropriate grammatical and mechanical structures to support the development of their writing and to successfully express meaning
● to have students read advanced college-level texts for the purposes of discussion and composition
● to teach students to collaborate with peers and learn how to supply effective feedback
● to provide students with the skill for using a range of technologies to address different audiences

Learning outcomes

Students will:

● practice the appropriate writing process strategies: pre-writing, composing and revising, editing, and consideration of audience and purpose
● employ critical and creative thinking skills for self-assessment and reflection on the writing process
● apply the appropriate grammatical and mechanical structures to support the development of their writing and to successfully express meaning

MLSP-201 Beginning Spanish I

Course description

This course introduces the Spanish language and the culture of Hispanic countries to beginners, and provides a basic foundation in all skills in Spanish (speaking, listening, reading, writing, culture) through intensive practice in a variety of media. Language work progresses from autobiographical information, through the present tense, to preliminary work in the past tenses. Students must take placement exam if this is their first RIT class in Spanish and they have some prior study of Spanish. Class 4, Credit 4 (F)

Course Objectives

The primary aim of this course is to provide students with a sound basis for learning to communicate effectively and accurately in Spanish as it is spoken and written today. Practice is given in all four basic skills - listening, speaking, reading, and writing – with many opportunities for student-student interaction and self-expression in realistic situations.

A second important aim of the course is to introduce students to contemporary life and culture in Spain and Spanish speaking countries. The dialogues, readings, and cultural notes have been written to depict what life is like there today.

Learning Outcomes

By the end of the course, students should be able to use with confidence the basic structures of the language, to have mastered an active vocabulary of approximately 1,200 Spanish words and to recognize many more words in speech and writing. They should have mastered the basic features of the sound system and be able to communicate orally and in writing on everyday topics. Students should also have gained an appreciation for varied aspects of culture in Spanish speaking countries.

Grading

The following categories will determine your grade:

Homework and/or Other Written Assignments 10 points
Quizzes (3 quizzes) (3 x 20) 60 points
Oral In-class Examination (2 x 5) 10 points
Final Oral Exam 10 points
Class Absences and Class Participation 10 points
TOTAL 100 points

Class format: Class hours 4 Lab hours 0
Course materials and textbooks:

- PLAZAS, Lugar de encuentros, Robert Hershberger, Susan Navey-Davis, Guiomar Borrás Álvarez, Fifth edition, HEINLE CENGAGE Learning

Additional books:

- Keith Chambers; Beginner's Spanish Grammar; teach Yourself Books (or any other grammar of the Spanish language)
MLGR-201 Beginning German I

Course Description
This is the first course in a two-course sequence. The sequence provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. Students must take a placement exam if this is their first RIT class in German and they have some prior study of German. Class 4, Credit 4 (F)

Course Objectives
The primary aim of this course is to provide students with a sound basis for learning to communicate effectively and accurately in German as it is spoken and written today. Practice is given in all four basic skills - listening, speaking, reading, and writing – with many opportunities for student-student interaction and self-expression in realistic situations.

A second important aim of the course is to introduce students to contemporary life and culture in German speaking countries. The dialogues, readings, and cultural notes have been written to depict what life is like there today.

Learning Outcomes
By the end of the course, students should be able to use with confidence the basic structures of the language, to have mastered an active vocabulary of approximately 1,200 German words and to recognize many more words in speech and writing. They should have mastered the basic features of the sound system and be able to communicate orally and in writing on everyday topics. Students should also have gained an appreciation for varied aspects of culture in German speaking countries.

MLIT-201 Beginning Italian I

Course Description

This is the first course in a two-course sequence. The sequence provides students without prior exposure to the language with a sound basis for learning Italian as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the Italian-speaking countries. Students must take placement exam if this is their first RIT class in Italian and they have some prior study of Italian. Class 4, Credit 4 (F)

Course Objectives

The primary aim of this course is to provide students with a sound basis for learning to communicate effectively and accurately in Italian as it is spoken and written today. Practice is given in all four basic skills - listening, speaking, reading, and writing – with many opportunities for student-student interaction and self-expression in realistic situations.

A second important aim of the course is to introduce students to contemporary life and culture in Italy and Italian speaking countries. The dialogues, readings, and cultural notes have been written to depict what life is like there today.

Learning Outcomes

By the end of the course, students should be able to use with confidence the basic structures of the language, to have mastered an active vocabulary of approximately 1,200 Italian words and to recognize many more words in speech and writing. They should have mastered the basic features of the sound system and be able to communicate orally and in writing on everyday topics. Students should also have gained an appreciation for varied aspects of culture in Italian speaking countries.

Grading

The following categories will determine your grade:

- Homework and/or Other Written Assignments 10 points
- Quizzes (3 quizzes) (3 x 20) 60 points
- Oral In-class Examination (2 x 5) 10 points
- Final Oral Exam 10 points
- Class Absences and Class Participation 10 points
- TOTAL 100 points

Class format: Class hours 4 Lab hours 0
Course materials and textbooks:

Additional course material:

- Progetto italiano 1 – S. Magnelli, T. Marin – Edilingua
- Italian Grammar in Practice - Susanna Nocchi - Alma Edizioni Firenze
- Ecco! Grammaticaitaliana - Claudio Manella - Progetto Lingua Firenze

MLFR-201 Beginning French I

Course description
This course introduces the French language and the culture of French speaking countries to beginners, and provides a basic foundation in all skills in French (speaking, listening, reading, writing, culture) through intensive practice in a variety of media. Language work progresses from autobiographical information, through the present tense, to preliminary work in the past tenses. Students must take placement exam if this is their first RIT class in French and they have some prior study of French. Class 4, Credit 4 (F)

Course Objectives
The primary aim of this course is to provide students with a sound basis for learning to communicate effectively and accurately in French as it is spoken and written today. Practice is given in all four basic skills - listening, speaking, reading, and writing – with many opportunities for student-student interaction and self-expression in realistic situations.

A second important aim of the course is to introduce students to contemporary life and culture in France and French speaking countries. The dialogues, readings, and cultural notes have been written to depict what life is like there today.

Learning Outcomes
By the end of the course, students should be able to use with confidence the basic structures of the language, to have mastered an active vocabulary of approximately 1,200 French words and to recognize many more words in speech and writing. They should have mastered the basic features of the sound system and be able to communicate orally and in writing on everyday topics. Students should also have gained an appreciation for varied aspects of culture in French speaking countries.

Grading

Homework and/or Other Written Assignments 10 points
Quizzes (3 quizzes) (3 x 20) 60 points
Oral In-class Examination (2 x 5) 10 points
Final Oral Exam 10 points
Class Absences and Class Participation 10 points
TOTAL 100 points

Class format: Class hours 4  Lab hours 0

Course materials and textbooks:
Horizons, 6th edition by Manley, Smith, McMinn, and Prévost

Horizons, Workbook/Lab Manual–available online via QUIA

Text Audio CDs & Resources available through the Heinle Learning Center (iLrn)

Additional course material:

Les 500 Exercices de phonétique A1/A2 – Hachette, 2009

Course Description

This course is an introduction to designing, prototyping, and creating applications and Web Apps for mobile devices. These devices include a unique set of hardware and communications capabilities, incorporate novel interfaces, are location aware, and provide persistent connectivity. Topics covered include user interaction patterns, connectivity, interface design, software design patterns, and application architectures. Programming projects are required.

Prerequisite: ISTE-240.

Course objectives

As the percentage of people utilizing mobile devices in everyday life and to access Internet rapidly increases, specific design and implementation considerations need to be taken into account when developing applications and Web Apps for mobile devices. In this course, students will study various approaches and development environments for designing, prototyping, implementing, deploying and testing mobile device software. Advantages and disadvantages of each approach and environment will be discussed followed by hands-on student experience through projects, in-class and homework exercises. Particular attention will be paid to mobile interaction patterns and user interface design as well as to employment of APIs and cross-platform development tools.

Learning outcomes

At the successful completion of this course, the student will be able to:

- Differentiate between the design and capabilities of mobile application, web apps and desktop applications
- Utilize available development environments to design, code, test and deploy hybrid mobile applications
- Create effective mobile interfaces utilizing accepted interface conventions
- Create mobile applications utilizing multiple types of digital media
- Create mobile applications that consume web services, and post application data to a data store

Grading

- Final Project Proposal 10%
- Final Project Design Prototype 10%
- Final Project Implementation 15%
- Mid Semester Exam 15%
- End of Semester Exam 25%
● Homework Exercises (Small Apps) 25%

**Class format:**

Class 3 hours, Lab 0 hours

**Course materials and textbooks:**

None required.
ISTE-330 Database Connectivity and Access

Course Description

In this course, students will build applications that interact with databases. Through programming exercises, students will work with multiple databases and programmatically invoke the advanced database processing operations that are integral to contemporary computing applications. Topics include the database drivers, the data layer, connectivity operations, security and integrity, and controlling database access.

Prerequisites: ISTE-120, ISTE-121, ISTE-230.

Course objectives

This course is part of the BS/IT core course offerings that provide fundamental IT skills. Specifically, this course covers foundation database connectivity content for multi-tier architectures.

Learning outcomes

At the end of the successfully completed course students should be able to:

- Apply basic object-oriented programming (OOP) techniques in the development of database-driven applications; evaluated by course lab exercises and/or practicums.
- Implement fully functional database interfaces utilizing various data access APIs such as JDBC or ODBC, for single server, multi-server, and/or multi-client networks; evaluated by course lab exercises and/or practicums.
- Connect to, and issue queries against, different DBMSs; evaluated by course lab exercises, and/or practicums.
- Discuss and implement various standard data access techniques designed to improve DBMS connectivity and access performance; evaluated by in-class discussions, course lab exercises, written reports, practicums, and/or course examinations.
- Compare and contrast similarities and differences between various popular data access APIs, such as DAO, RDO, ADO, ODBC, JDBC, etc.; evaluated by in-class discussions, homework exercises, written reports, and/or course examinations.
Grading

Exercises 20%
Midterm Exams 30%
Final Exam 15%
Project 30%
In Class Participation 5%

Class format:

Class 3 hours, Lab 0 hours

Course materials and textbooks:

None required.
Course Description

The goal of this course is to explore the issues involved in the design and implementation of client-side programming – both web and desktop application based. Topics include standards, browser and Document Object Model manipulation issues, design and deployment of both Web-based and desktop-based clients targeting multiple browsers, operating systems, and platforms. Use of specific Application Programming Interfaces and libraries where appropriate. The course will focus in the design, development, and implementation of usable, effective clients and client interfaces, both desktop and mobile, using multiple technologies.

This course will explore the analysis, design, development, and implementation of client-side programming in the context of Internet technologies, mobile devices, Web-based client systems and desktop applications. Students will learn to design and build usable and effective interactive systems, clients, and interfaces. Key features addressed will include browser and platform compatibility, object reusability, bandwidth and communications issues, development environments, privacy and security, and related technologies and APIs. Programming is required.

Class format:  Class hours 3  Lab hours 0

Prerequisites: ISTE-240 or equivalent

SWEN-383 Software Design Principles and Patterns

Course Description
Quality software designs and architectures reflect software engineering principles that represent best contemporary practice. This course focuses on explicating these fundamental principles, examining a set of design and architecture patterns that embody the principles, and applying patterns appropriate to a design problem in a given context. Restricted to IST majors only.

Prerequisites: ISTE-240 or equivalent course. Co-requisite: ISTE-340 or equivalent course.

Class Format: Lecture/Lab Hours 3, Credits 3

Course Objectives
Quality software designs and architectures reflect software engineering principles that represent best contemporary practice. This course focuses on explicating these fundamental principles, examining a set of design and architecture patterns that embody the principles, and applying patterns appropriate to a design problem in a given context. The course will cover several broad areas of software engineering. Among them:
- Software engineering design principles
- Software design patterns
- Implementation challenges

Learning Outcomes
By the end of this course, the student should be able to:
- Select and apply appropriate design patterns. Assessed by projects, exams.
- Analyze designs in terms of contemporary design principles. Assessed by homework, exams.
- Develop software within the context of architectural styles. Assessed by projects.
- Improve existing systems by refactoring in the context of patterns. Assessed by projects, exams.

Course Materials and Textbooks
This course does not require any textbooks. All required readings will be from digital media and will be linked or posted on myCourses.
MLSP-202 Beginning Spanish II

Course description
This course continues the basic grammatical structures, vocabulary and situations of first-year Spanish. Beginning Spanish 2 continues work in the past tenses and includes work on the subjunctive mood, plus the future and conditional tenses. Students work on paragraph-length speech and writing, and move toward readiness for conversation and composition. (MLSP-201 Beginning Spanish I or equivalent proficiency) Class 4, Credit 4 (S)

Course Objectives
The primary aim of this course is to provide students with a sound basis for learning to communicate effectively and accurately in Spanish as it is spoken and written today. Practice is given in all four basic skills - listening, speaking, reading, and writing – with many opportunities for student-student interaction and self-expression in realistic situations.

A second important aim of the course is to introduce students to contemporary life and culture in Spanish speaking countries. The dialogues, readings, and cultural notes have been written to depict what life is like in Spanish speaking countries today.

Learning Outcomes
By the end of the course, students should be able to use with confidence the basic structures of the language, to have mastered an active vocabulary of approximately 1,200 Spanish words and to recognize many more words in speech and writing. They should have mastered the basic features of the sound system and be able to communicate orally and in writing on everyday topics. Students should also have gained an appreciation for varied aspects of culture in Spanish speaking countries.

YEAR 3 – COURSE DESCRIPTIONS
ISTE-341 Server Programming

Course Description
This course provides in-depth work in server-side programming. Students will develop dynamic, data centric web pages and systems, and server-side information services that will be available to clients implemented in a variety of software technologies. Topics include XML parsing, generation, and consumption; web configuration and security; design patterns; web service structures, and application security. Programming projects are required.

Prerequisites: SWEN-383 and ISTE-340 or equivalent courses.

Class Format: Lecture/Lab Hours 3, Credits 3

Course Objectives
Among others, following topics will be covered in this course:

- For creating web pages and systems:
  - Server-side programming
  - Database creation, access, and manipulation review
  - Libraries, building and using
  - XML parsing, generation and consumption
  - Configuration and security
  - GET, POST, PUT, DELETE processing
  - Patterns and architecture
  - Command line scripting

- For serving up data:
  - Basic RESTful service structure and construction
  - Mid Tier
  - Proxies
  - Business Layer Implementation
  - Service Layer Implementation
  - OOP PHP
  - Application security

Learning Outcomes
By the end of this course, the student should be able to:

- Describe and use web protocols
- Analyze server language strengths and weaknesses
- Build a medium-scale dynamic Web sites, applications and systems
- Use server-side technologies to consume disparate information systems
- User server-side technologies to create information systems that can be consumed by different clients and servers
- Use server-side languages to retrieve and update data from files, file structures, and databases.

Course Materials and Textbooks

This course does not require any textbooks. All required readings will be from digital media and will be linked or posted on myCourses.
Course Description

In this course, students will gain experience with the processes, practices, and tools professional developers use to deliver robust and maintainable applications. Students will apply these practices and tools to build smaller-scale production-quality applications and systems. Topics include development life cycles, version control, test bed development and use, build utilities, error handling, deployment tools, and documentation.

Prerequisites: Completion of one of the following programming courses is required: ISTE-101, ISTE-121 or equivalent, ISTE-200, ISTE-202, IGME-102, IGME-106, 4080-223, 4080-231, CSCI-142, CSCI-242, CSCI-243, 4003-243 or 4003-334.

Course Objectives

Among others, following topics will be covered in this course:

- Development Methodologies, Diagramming Development
- Version Control
- Build Utilities, Testing
- Error Handling, Logging; Bug Tracking, Profiling
- Generic Code, Data-driven Code
- Reverse Engineering
- Efficient Code
- Application Deployment, Help Systems, Documentation

Learning Outcomes

By the end of this course, the student should be able to:

- Compare and contrast development methodologies.
- Describe and use techniques for error handling.
- Use appropriate tools to improve software development, performance, and deployment.
- Explain the concerns when designing software for maintenance.
- Develop documentation and functions to assist both developers and users.

**Class Format:** Lecture/Lab Hours 3, Credits 3

**Course Materials and Textbooks**

This course does not require any textbooks. All required readings will be from digital media and will be linked or posted on myCourses.
Course Description
Introduction to the scope and methodology of psychology. Provides a survey of basic concepts, theories, and research methods. Topics include: thinking critically with psychological science; neuroscience and behavior; sensation and perception; learning; memory; thinking, language, and intelligence; personality; psychological disorders and therapy; and social psychology.

Goals of the Course

- Introduce students to the field of psychology, its basic concepts, theories, research methods, and contributions to the understanding of human behavior.
- Teach students to think as scientists and learn to apply introductory principles, concepts, and terms to everyday life.
- Develop critical thinking and problem solving skills as they relate to the application of psychology and its principles.
- Provide a foundation that will enable students to understand, and benefit from, advanced courses in psychology.

Course Learning Outcomes and Associated Assessment Methods

- Understand core concepts and controversies from each of the 10 topic areas (exams, research report, in-class activities, discussions)
- Understand relationships between individuals, the environment, cognition, and behavior (exams, research report, in-class activities, discussions)
- Be familiar with the major critical debates in psychology and the evidence used by the different sides of each debate (exams, research report, in-class activities, discussions).
- Demonstrate the ability to think critically about theories and research in Psychology (research report, discussions).
- Demonstrate effective written communication skills (research report).

Text & Additional Resources: I will place a selection of readings from various sources on MyCourses and direct you to possible resources available through the Wallace Library at RIT.
ENGL-210 Literature, Culture and Media

Course Description

Students will study literary and cultural texts selected from traditional literature to contemporary media and culture (including mythology, poetry, plays, novels, film, graphic novels, and digital literature). Students will analyze these texts from a variety of perspectives and become familiar with the history of debates about literature and/or culture as arenas of human experience.

Goals of the course

- to develop analytical skills through reading, discussion, and writing
- to develop critical thinking skills through close reading of literary texts, cultural artifacts, and critical/analytical essays on these subjects
- to introduce the skills, principles, and terminology of literary interpretation
- to gain an appreciation for the art and politics of literary and cultural representations
- to develop an awareness of the correlation between literary and cultural artifacts, and their social and cultural contexts
- to gain a broad understanding of genres—in literary, oral, aural, and visual media—as well as how these genres can interact with one another
- to become familiar with scholarly and popular debates over literary canons, critical analysis, and cultural studies

Learning outcomes

Students will:

- Consider the reasons that people read and write literature
- Consider the social and personal function of literature and other creative arts
- Experience reading as a sustained activity over a period of several months, with a peer cohort
- Develop English vocabulary
- Consider style of expression and the writer’s craft
- Develop skills in close reading, note taking, and attention to textual detail
- Develop an understanding of the impact of authors’ cultural and historical circumstances on their work
- Recognize connections between literature and life
- Use the RIT library electronic databases to search for contemporary short stories
- Practice their presentation and public speaking skills

Graded Assignments
Reader Response Journals/Portfolio
Poetry test
Short story test
Student-led discussion on selected contemporary short story
Test on student-selected stories
Final creative essay
Participation

**Class format:** Class hours 3 Lab hours 0

**Course materials and textbooks:**

The Course Packet should be purchased at the RIT Croatia copy center. Older course packets are out of date and should not be used.

Additional required readings may be posted on My Courses. These readings will be announced by the professor. Students will be expected to download, print, read and save these texts.
MLSP-301 Intermediate Spanish I

Course Description

This is the first course in the Intermediate Spanish sequence (second year). Intermediate Spanish I is a course in Conversation, along with grammar review and culture study. Emphasis is on tourist survival situation dialogues, various forms of conversation, grammar review, and both formal and informal culture (the arts and daily behavior). The basic skills learned in the first year courses are now put into practice. (MLSP-202 Beginning Spanish II or equivalent proficiency; students must take the placement exam if this is their first RIT Spanish class, and they have some prior study of Spanish) Class 3, Credit 3 (F)

Course Objectives

This course is designed to help students improve their vocabulary and better use their knowledge of the Spanish language. The primary goal of the course is to enable them to feel free to discuss various subjects/topics and express their own opinions freely, in Spanish.

Each lesson will cover one area (or one problem) of everyday life. Students will have to make a comparison between different realities: Spanish, their own view of it and their perspective of that situation in their own country. They will learn how to converse in Spanish and exchange their ideas freely. Students will master at least one grammar feature in each lesson in an applied way: they will have to immediately apply various grammatical structures in conversation or written/oral exercises.

In order to give students more opportunity to practice speaking, each of them will also participate in at least one (team-) project during the quarter and will have to make a presentation in Spanish on a chosen topic.

One of the most important objectives of the course is also to teach students how to write better in Spanish, and prepare them to use this language in their professional careers in the future. For this purpose students will have to write a short essay (a paragraph) every week. The theme of the paragraph can also be the theme of the in-class discussion. The instructor will also organize (when necessary, at least once in a semester) writing labs, where students will be correcting each other thus learning from each other’s mistakes.

ISTE-442 Web Application Development

Course Description
When building larger-scale web applications, there are a myriad of concerns that range from technology, framework, and architecture selection to runtime performance optimization. This course focuses on the development of integrated web applications that consume information served from one or many sources. Trends in web application development are identified and assessed. Programming projects are required.

Prerequisites: ISTE-341 or equivalent courses

Class Format: Lecture/Lab Hours 3, Credits 3

Course Objectives
Among others, following topics will be covered in this course:

● Principles of Client-Server distributed code in a web environment (protocols, languages, architectures)
● Client-side rendering environments (HTML5, SVG, proprietary technologies)
● Server-side development environments (PHP, Perl, content management system, application architectures)
● Dynamic generation of client-side code at the server
● Communication between client and server (GET and POST, AJAX, JSON)
● Each student will choose an advanced topic and present it

Learning Outcomes
By the end of this course, the student should be able to:

● Write applications which are browser and platform independent. Assessed by individual projects.
● Integrate client-server technologies by dynamically generating client-side code at the server that has the ability to manipulate the DOM on the client. Assessed by individual projects.
● Write programs and GUls using technologies such as SVG, JavaScript, PHP, SQL and other scripting environments to gain competence with current and future practices. Assessed by individual projects.
● Research new technologies and techniques. Assessed by in-class presentations.

Course Materials and Textbooks

In addition to the books, online readings might be assigned in class.
Course Description

Web developers often need to go beyond building Web pages and client-server programming to plan, install, configure, develop, and maintain the Web servers that host their sites. They need to understand issues of scalability, performance, and security as they apply to deploying a Web presence.

Course objectives and learning outcomes

This course provides a practical hands-on approach to development, configuration, and administration of Web server platforms. Topics include issues of and approaches to scalability, multiple server systems, security, and auditing, as well as the many configuration options, modules, and server alternatives available. By the end of the course, each student will be expected to:

- Understand the security and auditing aspects of web server programming
- Demonstrate the ability to install and analyze scalability and performance issues
- Install, configure, develop and maintain web servers

ENVS-150 Ecology of the Dalmatian Coast

Course Description

This course is an introduction to population, community and ecosystem ecology, stressing the dynamic interrelationships of plant and animal communities of the Dalmatian Coast. The course includes such ecological concepts as energy flow and trophic levels in natural communities, population and community dynamics, biogeography and ecosystem ecology. Field trips to local ecosystems are included. Class 3, Lab 2, Credit 4 (S)

Goals of the course

- to explain and synthesize ecological concepts at the individual, population, community, and ecosystem level
- to learn about experimental design and local ecosystems
- to critically read scientific articles
- revise and improve written content

Learning Outcomes

- Identify, explain, and assess different viewpoints, pressures, and conflicts associated with environmental issues
- Develop analytical capabilities through field exercises
- Critically evaluate materials presented in class and during labs.
- Defend claims and solutions using evidence gathered from primary literature
- Identify how human actions impact the concept of sustainability and ways to minimize these impacts
- Demonstrate ability to work on a group assignment
- Improve communication skills

Papers selected from the primary literature (updated annually)
Course Description

This course is a survey of foundational, and normative, approaches to ethics, understood as a systematic study into morality, and the moral questions regarding motivation. Topics will include virtue ethics, deontology, consequentialism, contractualism, evolutionary foundations of morality, and other approaches. Normative questions are questions about good and goodness, evil and badness, right and rightness, wrong and wrongness. Foundational approach to ethics deals with meta-ethical questions about the nature of morality and the sources of moral systems, their justifications etc. Ethics is a paradigmatic action-guiding discipline, i.e. it is about not only learning what something, i.e. an moral phenomenon, is, but also how to apply normative theories, make ethical decisions, justify ethical positions etc.

Rather than a course in the history of ethics, this course serves as an introduction to the practice of ethical deliberations and discussions.

Course objectives

The focus of Foundations of Moral Philosophy is primarily not on finding dogmatic and definite answers on hard questions, but rather on a deep understanding of moral issues and dilemmas, formulating proper questions and understanding the method of answering them. The process of finding an answer enriches our intellectual imagination by evaluation of different possible options and diminishes the dogmatic assurance which closes the mind against speculation and critical approach to reality.

Learning outcomes

The main outcomes of this course are:

- to become skillful in understanding and interpreting various ethical positions;
- to become familiar with major philosophical ethical approaches and the methods of handling them in everyday life;
- to be able to adopt "philosophical attitude" as an elevated form of human curiosity and resistance to any kind of dogmatism.
- to evaluate and question one’s own beliefs and values.

Grading

- Class participation (active participation in class)
discussions and writing comments on class material): 30 pts

- Two quizzes: 60 pts
- Final presentation: 10 pts

Class format:
Class hours 3

Course materials and textbooks:
Possible resources (a narrower choice will be made according to the availability of the material):

Meta-ethical theories:
- G. Graham, *Theories of Ethics*
- D. Brink, “Autonomy of Ethics”
- H. Sidgwick, *The Methods of Ethics*
- R. Shafer-Landau, *Fundamentals of Ethics*
- G. E. Moore, *Principia Ethica*

Different ethical positions
- Plato, *Republic, Euthyphro, Meno*
- Aristotle, *Nichomachean Ethics*
- D. Hume, *Treatise of Human Nature*
- J. Bentham, *An Introduction to the Principles of Morals and Legislation*
- I. Kant, *Groundwork of the Metaphysics of Morals*
- J. S. Mill, *Utilitarianism*
- F. Nietzsche, *On the Genealogy of Morals*
- J. Rawls, *A Theory of Justice*

MLSP-302 Intermediate Spanish II

Course Description

This is the second course in the Intermediate Spanish sequence (second year). Intermediate Spanish II is a composition course, emphasizing grammar review, composition, business-letter writing, Spanish for the Professions, and culture, while also including work in speaking and listening. The basic skills learned in the first year courses are now put into practice. In addition to the language work, there is significant work on cultural topics of Spanish-speaking countries at the intermediate level. (MLSP-301 Intermediate Spanish I or equivalent proficiency; students must take the placement exam if this is their first RIT Spanish class, and they have some prior study of Spanish) Class 3, Credit 3 (S)

Course Objectives

This course is designed to help students improve their vocabulary and better use their knowledge of the Spanish language. The primary goal of the course is to enable them to feel free to discuss various subjects/topics and express their own opinions freely, in Spanish.

Each lesson will cover one area (or one problem) of everyday life. Students will have to make a comparison between different realities: Spanish, their own view of it and their perspective of that situation in their own country. They will learn how to converse in Spanish and exchange their ideas freely. Students will master at least one grammar feature in each lesson in an applied way: they will have to immediately apply various grammatical structures in conversation or written/oral exercises.

In order to give students more opportunity to practice speaking, each of them will also participate in at least one (team-) project during the quarter and will have to make a presentation in Spanish on a chosen topic.

One of the most important objectives of the course is also to teach students how to write better in Spanish, and prepare them to use this language in their professional careers in the future. For this purpose students will have to write a short essay (a paragraph) every week. The theme of the paragraph can also be the theme of the in-class discussion. The instructor will also organize (when necessary, at least once in a semester) writing labs, where students will be correcting each other thus learning from each other’s mistakes.
Grading

MLGR-302 Intermediate German II

Course description

This is the second course of a two-course sequence at the intermediate level. The sequence provides students with the tools to increase their ability to function in German. Communicative activities, contemporary texts, the study of vocabulary and grammar are used to expand all communication skills, especially oral proficiency. This sequence continues to address issues of contemporary German life and culture. (MLGR-301 Intermediate German I or equivalent proficiency; students must take the placement exam if this is their first RIT German class, and they have some prior study of German) Class 3, Credit 3 (S)

Course objectives

This course is designed to help students improve their vocabulary and better use their knowledge of the German language. The primary goal of the course is to enable them to feel free to discuss various subjects/topics and express their own opinions freely, in German.

Each lesson will cover one area (or one problem) of everyday life. Students will have to make a comparison between different realities: German, their own view of it and their perspective of that situation in their own country. They will learn how to converse in German and exchange their ideas freely. Students will master at least one grammar feature in each lesson in an applied way: they will have to immediately apply various grammatical structures in conversation or written/oral exercises.

One of the most important objectives of the course is also to teach students how to write better in German, and prepare them to use this language in their professional careers in the future. For this purpose students will have to write a short essay (a paragraph) every week. The theme of the paragraph can also be the theme of the in-class discussion. The instructor will also organize (when necessary, at least once in a semester) writing labs, where students will be correcting each other thus learning from each other’s mistakes.

MLRU-302 Intermediate Russian II

Course Description

This is the second course of a two-course sequence at the intermediate level. The sequence provides students with the tools to increase their ability to function in Russian. Communicative activities, contemporary texts, the study of vocabulary and grammar are used to expand all communication skills, especially oral proficiency. This sequence continues to address issues of contemporary Russian life and culture. (MLRU-301 Intermediate Russian I or equivalent proficiency) Class 3, Credit 3 (S)

Course objectives

This course is designed to help students improve their vocabulary and better use their knowledge of the Russian language. The primary goal of the course is to enable them to feel free to discuss various subjects/topics and express their own opinions freely, in Russian.

Each lesson will cover one area (or one problem) of everyday life. Students will have to make a comparison between different realities: Russian, their own view of it and their perspective of that situation in their own country. They will learn how to converse in Russian and exchange their ideas freely. Students will master at least one grammar feature in each lesson in an applied way: they will have to immediately apply various grammatical structures in conversation or written/oral exercises.

In order to give students more opportunity to practice speaking, each of them will also participate in at least one (team-) project during the quarter and will have to make a presentation in Russian on a chosen topic.

One of the most important objectives of the course is also to teach students how to write better in Russian, and prepare them to use this language in their professional careers in the future. For this purpose students will have to write a short essay (a paragraph) every week. The theme of the paragraph can also be the theme of the in-class discussion. The instructor will also organize (when necessary, at least once in a semester) writing labs, where students will be correcting each other thus learning from each other’s mistakes.

YEAR 4 – COURSE DESCRIPTIONS
ISTE-454 Mobile Applications Development 1

Course Description

This course extends the material covered in the Foundations of Mobile Design course and provides students with experience writing native applications for mobile devices such as Smartphones in one of the current major platforms. These devices are exceptionally portable, have unique sets of hardware and communications capabilities, incorporate novel interfaces, are location aware, and provide persistent connectivity. Students are encouraged to make use of these unique characteristics and operating properties to develop innovative applications. Programming projects are required.

Prerequisites

ISTE-452 Foundations of Mobile Design, ISTE-340 Client Programming, or instructor permission

Course objectives and learning outcomes

The purpose of this course is to provide students with the experience of creating native applications for mobile phones. Topics covered include user interaction patterns, connectivity, interface design, software design patterns, and application architecture within the context of mobile computing.

ISTE-500 Senior Development Project I

Course Description

The first course in a two-course, senior level, system development capstone project. Students form project teams and work with sponsors to define system requirements. Teams then create architectures and designs, and depending on the project, also may begin software development. Requirements elicitation and development practices introduced in prior coursework are reviewed, and additional methods and processes are introduced. Student teams are given considerable latitude in how they organize and conduct project work.

Course objectives

To learn all phases in project management with special emphasize on:

- Initiation phase
- Definition phase
- Design phase
- Development phase

Learning outcomes

- Students will learn the basic about delivering a prototype or 'proof of concept';
- Students will be oriented towards defining requirements and design limitations of project;
- Students will be faced with research and development phase as crucial in IT project;
- Students will master team reporting.

**Course materials and textbooks:**

Scott Berkun; Making Things Happen: Mastering Project Management (Theory in Practice), Revised Edition; O'Reilly; 2008; ISBN-10: 0596517718

Course Description

This course is part of a two-semester sequence that when combined presents an integrated approach to the interrelated, interdisciplinary principles of environmental science through case studies, site visits, and field work. Through assigned readings, classroom discussion and case studies dealing with global environmental issues as well as the environmental issues related to the Dalmatian coast, students will learn how to critically analyze environmental problems from a multidisciplinary perspective and to propose solutions. (COS-ENVS-150) Class 3, Lab 2, Credit 4 (F)

Course objectives

This course will introduce students to interdisciplinary environmental problems with a focus on the underlying scientific principles surrounding the issues. Students will learn problem solving techniques that integrate concepts and tools across disciplines and learn to conceptualize environmental problems from multiple perspectives.

Learning Outcomes

- Identify, explain, and assess different viewpoints, pressures, and conflicts associated with environmental issues
- Develop analytical capabilities through field exercises
- Critically evaluate materials presented in class and during labs
- Defend claims and solutions using evidence gathered from primary literature
- Identify how human actions impact the concept of sustainability and ways to minimize these impacts
- Demonstrate ability to work on a group assignment
- Improve communication skills

Grading

Exams, papers, group projects, class discussion, oral presentation

Class format: Class hours 2  Lab hours 2

Course materials and textbooks:
Griffin, J.M. *Global Climate Change: the science, economics and politics*. The Bush School, College Station, TX
PSYC-236 Personality

Course Description

This course is intended for students who are interested in learning the history and current status of personality theories. This course examines historical and current psychological theories of personality representing a broad range of perspectives, including psychoanalytic, neopsychoanalytic, humanistic, behavioral, cognitive, and trait theories. The course will also explore biological aspects of personality as well as influences of gender and cultural on individual differences. Students will learn the strengths and weaknesses of the major personality theories, as well as how to assess research and apply these theories. As much as possible, application to real life situations will be discussed.

Course objectives and learning outcomes

The primary aim of this course is to develop an understanding of the major theories of personality, their strengths and weaknesses, and the relationships between them. After that, understand the methods involved in personality psychology research and examine the ways in which humans differ with regards to personality. A second important aim of the course is to introduce students what variables that influence personality and how personality might influence behavior. Introduce students to reflect on your own personality and using tool for describing and explaining personality functions.

By the end of the course, students should be able to identify major people, concepts, and theoretical models covered in the course. Compare and contrast the major theoretical models of personality development and personality disorders, including relevant research findings. Use the language of the discipline of Psychology in the area of personality theory with clarity and precision in classroom discussions and Personality Project. When appropriate, apply the current edition of the APA style to written communications. Demonstrate the ability to think critically about important issues in the area of personality development through exams, classroom discussions, and Personality Project. Explain biological, familial, and social influences on individual differences. Recognize and appreciate diversity among people from different genders, races, ethnic, and cultural backgrounds.

TOTAL 100 points

Class format: Class hours 3, Lab hours 0

Course materials and textbooks:
2. Olson & Hergenhahn (2011). An Introduction to Theories of Personality, 8th Ed.
3. A selection of readings from various sources on MyCourses and resources available through the Wallace Library at RIT.
Course Description

This course extends the Mobile Application Development I experience to medium-size form factor mobile devices such as slates and tablets. Compared to smartphones, these devices have much larger screen areas, and have the potentials for more processing power, higher capacity memories, additional sensors, and higher capacity batteries. Students are encouraged to make creative use of these increased display and computing resources to develop innovative applications. Programming projects are required.

Prerequisites

ISTE-252 Foundations of Mobile Design, ISTE-340 Client Programming, or instructor permission

Course objectives and learning outcomes

The purpose of this course is to provide students with the experience of creating native applications for mobile phones and tablets. Topics covered include user interaction patterns, connectivity, interface design, software design patterns, and application architecture within the context of mobile computing for mobile platform Android.

ISTE-501 Senior Development Project II (capstone course)

Course Description
The second course in a two-course, senior level, system development capstone project. Student teams complete development of their system project and package the software and documentation for deployment. Usability testing practices introduced in prior coursework are reviewed, and additional methods and processes are introduced. Teams present their developed system and discuss lessons learned at the completion of the course. This course is a capstone course for the Web and Mobile Computing program.

Course objectives
To learn all phases in project management with special emphasize on:

- Implementation phase;
- Follow-up phase.

Learning outcomes

- Students will be oriented towards construction of the actual project result;
- Students will produce software package;
- Students will master making documentation.

PHIL-202 Foundations of Moral Philosophy

Course Description

This course is a survey of foundational, and normative, approaches to ethics, understood as a systematic study into morality, and the moral questions regarding motivation. Topics will include virtue ethics, deontology, consequentialism, contractualism, evolutionary foundations of morality, and other approaches. Normative questions are questions about good and goodness, evil and badness, right and rightness, wrong and wrongness. Foundational approach to ethics deals with meta-ethical questions about the nature of morality and the sources of moral systems, their justifications etc. Ethics is a paradigmatic action-guiding discipline, i.e. it is about not only learning what something, i.e. an moral phenomenon, is, but also how to apply normative theories, make ethical decisions, justify ethical positions etc.

Rather than a course in the history of ethics, this course serves as an introduction to the practice of ethical deliberations and discussions.

Course objectives

The focus of Foundations of Moral Philosophy is primarily not on finding dogmatic and definite answers on hard questions, but rather on a deep understanding of moral issues and dilemmas, formulating proper questions and understanding the method of answering them. The process of finding an answer enriches our intellectual imagination by evaluation of different possible options and diminishes the dogmatic assurance which closes the mind against speculation and critical approach to reality.

Learning outcomes

The main outcomes of this course are:

- to become skillful in understanding and interpreting various ethical positions;
- to become familiar with major philosophical ethical approaches and the methods of handling them in everyday life;
- to be able to adopt "philosophical attitude" as an elevated form of human curiosity and resistance to any kind of dogmatism.
- to evaluate and question one’s own beliefs and values.

Grading

- Class participation (active participation in class
discussions and writing comments on class material): 30 pts

- Two quizzes: 60 pts
- Final presentation: 10 pts

Class format:

Class hours 3

Course materials and textbooks:

Possible resources (a narrower choice will be made according to the availability of the material):

Meta-ethical theories:
- G. Graham, *Theories of Ethics*
- D. Brink, “Autonomy of Ethics”
- H. Sidgwick, *The Methods of Ethics*
- R. Shafer-Landau, *Fundamentals of Ethics*
- G. E. Moore, *Principia Ethica*

Different ethical positions
- Plato, *Republic*, *Euthyphro*, *Meno*
- Aristotle, *Nichomachean Ethics*
- D. Hume, *Treatise of Human Nature*
- J. Bentham, *An Introduction to the Principles of Morals and Legislation*
- I. Kant, *Groundwork of the Metaphysics of Morals*
- J. S. Mill, *Utilitarianism*
- F. Nietzsche, *On the Genealogy of Morals*
- J. Rawls, *A Theory of Justice*

- Films
PSYC-234 Industrial and Organizational Psychology

Course Description

Industrial and organizational (I/O) psychology is a branch of psychology that is largely directed at applying psychological principles and theories to the workplace. Being concerned with both a good job performance and the wellbeing of the worker, this course deals with personnel (often termed also industrial) and organizational psychology. The topics thus range from career choice, assessment of individual differences in the workplace and performance appraisal at work, to work motivation, job satisfaction, and more organizational topics such as leadership and teamwork. Work organizations in the contemporary world are increasingly multicultural determined so the course will deal also with the cross-cultural perspective to industrial and organizational psychology.

Course objectives and learning outcomes

- Think critically about theories in I/O psychology and their application in the workplace.
- Gain practical knowledge and experience of different methods and instruments of psychological assessment in the workplace.
- Gain knowledge of different areas of I/O psychology that largely connect to human resource management, including selection process and assessment of (potential) workers, job analysis and job performance evaluation.
- Acquire understanding of different areas of I/O psychology that importantly determine social and relational processes and elements in the organization; these being the employees work motivation, their satisfaction with the work and their occupational health and wellbeing.
- Gain insight and basic understanding into some of the highly relevant processes for contemporary organizations, such as leadership, teamwork and group processes, and organizational climate and culture.
- Critically examine issues around workplace diversity, justice and fairness in a dynamic, globalised and largely multicultural work settings.

Grading system

I/O portfolio (practical work on I/O instruments, reports of assessment) 50%
3 exams 50%
Total 100%

Class format: Class hours 3 Lab hours 0
Literature:

- Paul Levy, Industrial Organizational Psychology (4 edition)
- Handbook of Industrial, Work and Organizational Psychology

A selection of reading from various sources will be made available by instructor on MyCourses and through the Wallace Library at RIT.
